50 YEARS

The Open University’s Open Programme supports over 25,000 students studying towards a range of multidisciplinary qualifications; from a Certificate in Higher Education through to a BA/BSc (Hons) Open degree and an MA/MSc Open. Launched in August 2018, this free 5-hour Badged Open course on OpenLearn, **Multidisciplinary study: the value and benefits**, explores the advantages of studying more than one subject and has been designed to help students decide if multidisciplinary study is the right choice for them. Featuring interviews with Open University students and interactive online activities, the course provides learners with information about the unique skills that can be gained from studying a multi-subject qualification and how it can benefit their career prospects.
